

# message sendSingle

Description

Sends a prepared message as a single message to a specific user.

This method automatically adds the user who receives the email to the group of the prepared message. Attachments can be encoded using [base64encode.org](#)

Available from
v1

Request path

POST [REST URL]/message/sendSingle

Query Parameters

Parameter	Type	Description
recipientId	<a href="#">Long</a>	ID of the user
messageId	<a href="#">Long</a>	ID of the message
senderProfile	<a href="#">String</a>	TLS sender profile. Requires a Feature Switch and setting up profile name in Mapp Engage. (optional)

Request Body Type

[MessageContent](#) additionalContent

Example bodies

```
{
  {
    "parameters": [
      {
        "name": "Parameter Name 1",
        "value": "Parameter Value 1",
        {
          "name": "Parameter Name 2",
          "value": "Parameter Value 2"
        }
      ],
      "attachments": [
        {
          "name": "image.png",
          "contentType": "application/png",
