

# relatedData createRecord

## Description

Adds ONE record to a data set. The data set is defined using [RelatedDataFilter](#).

## Request path

POST [REST URL]/relatedData/createRecord

## Example body

```
{
  "datasetName":
  "products",
  "key": "testuser@domain.
com",
  "data": [
    {
      "name":
      "productname",
      "value":
      "bicycle"
    },
    {
      "name": "quantity",
      "value": "1"
    }
  ]
}
```

## Successful response

HTTP 204

## Error response

```
{
  "errorActor": "CLIENT",
  "errorCode":
  "NO_SUCH_OBJECT",
  "message":
  "RelatedDataList with
datasetName=products
does not exist.",
  "objectType":
  "RelatedDataList",
  "propertyName":
  "datasetName",
  "propertyValue":
  "myproducts"
}
```

## Error response

```
{
  "errorActor": "CLIENT",
  "errorCode":
  "UNEXPECTED_ERROR",
  "message": "com.ecircle.
das.DASSystemException:
No columns to insert in
dataset products",
  "errorId": null
}
```
