usagestatistics

REQUEST PARAMETER VALIDATION LOGIC:

- fromDate and toDate are to be provided as Strings and in ISO 8601 format.
- toDate must be after fromDate.
- fromDate and toDate are mandatory.
- the timeframe between fromDate and toDate cannot be more than 3 years.
- the format can have "csv" as values (case insensitive)
- the destination can be either:

    - "CONTENT_STORE" - mandatory to use the notificationuser parameter then.
    - a valid credential store entry of any of the following types: FTP account, REST endpoint, Amazon S3 endpoint, Google Cloud Storage endpoint
- notificationuser can only be a valid email address of an existing system user to be used ONLY when destination parameter = CONTENT_STORE.

POSSIBLE ERRORS:

- fromDate or toDate contains invalid data or are null. ERROR Message: "Please enter a valid date in ISO-8601 for fromDate and toDate"
- request cannot reach the Engage API server to retrieve results. ERROR Message: "The request has failed. Please get in touch with your Account Representative and quote [API error code]."
- format parameter contains something other than "csv". ERROR Message "Please enter "csv" for the format parameter."
- destination:

    - Invalid email. ERROR Message: "Please enter the email address of an existing Mapp Engage system user."
    - Invalid Credential Store Entry (when parsing request, FTP URL connection is tested).
    - Invalid Credential Store ID: ERROR Message: "Please enter a valid credential store entry ID of FTP Account type."
    - Invalid FTP Credentials. ERROR Message: "Please ensure the FTP credentials is valid."
    - Insufficient FTP permissions to write file to. ERROR Message: "Please ensure the FTP location is open for Mapp Engage to send the export file."
    - Invalid destination URL. ERROR Message: "Please ensure the destination path URL is valid."
